Profile Summary

Senior Backend Engineer with 7+ years of experience architecting scalable, high-concurrency web applications and microservices. Expert in the Node.js ecosystem (Fastify, Express, NestJS) and PHP frameworks (Laravel, Lumen), specializing in high-scale e-commerce architectures and Order Management Systems. Proven track record of designing low-latency RESTful APIs, optimizing complex database topologies (MySQL, MongoDB, Elasticsearch, Redis), and integrating AWS cloud infrastructure (EC2, S3, SQS, Lambda). Adept at driving end-to-end development, establishing efficient CI/CD pipelines, and enforcing robust API security standards (JWT, OAuth2).

Skills

JavaScript, TypeScript, Node.js, NestJS, Express.js, Fastify, Python, MongoDB, Mongoose, MySQL, PostgreSQL, Redis, RabbitMQ, Apache Kafka, Microservices, REST APIs, JWT (JSON Web Tokens), OAuth2, Passport.js, API Documentation, Swagger, Postman, Docker, AWS (EC2, S3, SES, RDS, SNS, SQS, Route53), CI/CD, Jenkins, Unit Testing, Mocha, Chai, Jest, Git, GitHub, GitLab, Agile/Scrum, JSON, PHP, Laravel, Lumen

Other Skills

Asana, JIRA, Jest, AWS (Amazon Web Services)

Notable Projects

https://ourshopee.com

- Tech Stack: Node.js, Elasticsearch, MySQL, AWS (SQS, S3), ReactJS, Bull Queue, Docker, CI/CD.
- Architected and scaled backend infrastructure for a high-concurrency e-commerce platform serving the GCC region, driving core API development and complex relational database design.
- Engineered a centralized Order Management System (OMS) and CRM in Node.js, implementing business logic for automated invoice generation, shipping label processing, and return/replacement eligibility.
- Designed event-driven, asynchronous processing architectures utilizing AWS SQS and Bull Queue for high-throughput tasks, including cron-driven scheduling and strict message deduplication for FIFO queues.
- Integrated ZIWO IVR systems for automated customer call flows, building robust retry management (3-call limit logic) and secure webhook payload processing.
- Engineered a bidirectional data synchronization pipeline between the internal OMS and Zoho CRM via REST APIs, ensuring real-time consistency of customer profiles.

https://aurumwisex.com

- Tech Stack: Node.js, MongoDB, Kafka, AWS, Laravel, ReactJS, Docker, Jenkins.
- Architected backend infrastructure and RESTful APIs from inception for a Neo-realty investment platform, delivering scalable, high-performance web services.
- Established secure, modular API endpoints adhering to SOLID principles to support the ReactJS frontend, incorporating strict data validation and global error handling.
- Integrated Kafka for event-driven, asynchronous data streaming and utilized MongoDB for flexible, high-performance financial data modeling.

Professional Experience

Software Developer

Ourshopee Pvt Ltd

May 2025 - Till Date

Ourshopee is a leading Marketplace platform in the Middle East, offering a wide range of products and services.

Responsibilities

- Architected low-latency web services utilizing Node.js and Fastify, optimizing Elasticsearch mappings and MySQL query plans for high-concurrency e-commerce traffic.
- Refactored legacy codebases applying SOLID principles, improving resource utilization and database query execution efficiency.
- Integrated regional payment gateways (Tamara, Tabby, Apple Pay), ensuring secure, atomic transaction handling and webhook reconciliation.

Software Developer

AurumWiseX Pvt Ltd

Aug 2023 - Oct 2024

WiseX is India's First & Largest Neo-realty investment platform by Aurum PropTech.

Responsibilities

- Designed and deployed scalable microservices using Node.js and Lumen, optimizing data handling and resource isolation for high-traffic environments.
- Integrated Razorpay Smart Collect APIs for automated payment reconciliation via virtual accounts and UPI workflows.
- Executed continuous performance tuning, refactoring core processing logic and optimizing relational database schemas.

Software Developer

GreenHonchos Pvt. Ltd.

Dec 2020 - Jul 2023

GreenHonchos is a full-stack D2C enabler, an ecommerce agency that provides end-to-end

https://hamleys.in

- Tech Stack: Node.js, Laravel, Vue.js, Docker, AWS.
- Translated business requirements into scalable architectural designs, developing core APIs to serve high-traffic web and mobile e-commerce platforms.
- Containerized application environments using Docker and orchestrated deployments on AWS to ensure high availability during peak retail traffic.

https://swoopos.com

- Tech Stack: Laravel, MongoDB, Docker, GitLab CI.
- Engineered secure, low-latency REST APIs for a mobile Point-of-Sale (POS) system, prioritizing transaction integrity and fault-tolerant data synchronization.
- Designed dynamic NoSQL database schemas in MongoDB to manage complex inventory and transaction ledgers.

https://tumi.in

- Tech Stack: Node.js, Microservices, Laravel, Lumen, Next.js, AWS Route53.
- Spearheaded the transition to a Microservices architecture using Node.js and Lumen, decoupling core services for modular scalability.
- Designed and optimized relational database schemas to handle varied product catalogs, high-concurrency checkouts, and multi-platform (Web/Mobile) inventory synchronization.
- Configured robust DNS routing and traffic management utilizing AWS Route53 to ensure minimal latency and high platform reliability.

https://hunkemoller.in

- Tech Stack: Node.js, Microservices, Laravel, Lumen, Next.js.
- Architected and implemented APIs and database schema for a cutting-edge platform from inception, ensuring seamless integration across web and mobile.

https://manishmalhotra.in

- Tech Stack: Node.js, JavaScript, Laravel, Lumen, Next.js, AWS Route53.
- Spearheaded the end-to-end development of APIs and database architecture for a high-impact couture e-commerce project.

https://www.ritukumar.com

- Tech Stack: Node.js, JavaScript, Laravel, Lumen, Next.js, AWS Route53.
- Designed and executed APIs and database schema, driving the project's architecture from the ground up.

Education

Bachelor of Computer Applications

Jamia Hamdard University, Delhi

2012 - 2015

Senior Secondary Education

QIC, U.P.

2010 - 2012

ecommerce solutions for D2C brands including digital branding.

Responsibilities

- Directed technical requirements gathering and system design, leading cross-functional engineering teams through the full software development lifecycle.
- Spearheaded the architecture of scalable RESTful APIs for D2C e-commerce platforms, enforcing strict separation of concerns.
- Implemented robust security protocols, including payload encryption, JWT/OAuth2 access controls, and secure coding standards.

Sr. Software Developer

PS QuickIT

Aug 2019 - Dec 2020

Responsibilities

- Developed and maintained core API endpoints for high-traffic e-commerce platforms, ensuring low latency and high availability.
- Optimized application security and runtime performance through collaborative code reviews and system audits.

Software Developer

Lexx Digital

Oct 2018 - Aug 2019

Responsibilities

- Constructed scalable REST APIs for mobile and web clients, implementing foundational security and data validation layers.

Certificates

Certificate of Completion

JavaScript from Udemy.

Certificate of Completion

Node.js from Udemy.
