Profile Summary

Senior Backend Engineer with 7+ years of experience architecting scalable, high-concurrency web applications and microservices. Expert in the Node.js ecosystem (Fastify, Express, NestJS) and PHP frameworks (Laravel, Lumen), specializing in high-scale e-commerce architectures and Order Management Systems. Proven track record of designing low-latency RESTful APIs, optimizing complex database topologies (MySQL, MongoDB, Elasticsearch, Redis), and integrating AWS cloud infrastructure (EC2, S3, SQS, Lambda). Adept at driving end-to-end development, establishing efficient CI/CD pipelines, and enforcing robust API security standards (JWT, OAuth2).

Skills

JavaScript | TypeScript | Node.js | NestJS | Express.js | Fastify | Python | MongoDB | Mongoose | MySQL | PostgreSQL | Redis | RabbitMQ | Apache Kafka | Microservices | REST APIs | JWT (JSON Web Tokens) | OAuth2 | Passport.js | API Documentation | Swagger | Postman | Docker | AWS (EC2, S3, SES, RDS, SNS, SQS, Route53) | CI/CD | Jenkins | Unit Testing | Mocha | Chai | Jest | Git | GitHub | GitLab | Agile/Scrum | JSON | PHP | Laravel | Lumen

Other Skills

Asana | JIRA | Jest | AWS (Amazon Web Services)

Notable Projects

https://ourshopee.com

- Tech Stack: Node.js, Elasticsearch, MySQL, AWS (SQS, S3), ReactJS, Bull Queue, Docker, CI/CD.
- Architected and scaled backend infrastructure for a high-concurrency e-commerce platform serving the GCC region, driving core API development and complex relational database design.
- Engineered a centralized Order Management System (OMS) and CRM in Node.js, implementing business logic for automated invoice generation, shipping label processing, and return/replacement eligibility.
- Designed event-driven, asynchronous processing architectures utilizing AWS SQS and Bull Queue for high-throughput tasks, including cron-driven scheduling and strict message deduplication for FIFO queues.
- Integrated ZIWO IVR systems for automated customer call flows, building robust retry management (3-call limit logic) and secure webhook payload processing.
- Engineered a bidirectional data synchronization pipeline between the internal OMS and Zoho CRM via REST APIs, ensuring real-time consistency of customer profiles.

https://aurumwisex.com

- Tech Stack: Node.js, MongoDB, Kafka, AWS, Laravel, ReactJS, Docker, Jenkins.
- Architected backend infrastructure and RESTful APIs from inception for a Neo-realty investment platform, delivering scalable, high-performance web services.
- Established secure, modular API endpoints adhering to SOLID principles to support the ReactJS frontend, incorporating strict data validation and global error handling.
- Integrated Kafka for event-driven, asynchronous data streaming and utilized MongoDB for flexible, high-performance financial data modeling.

https://hamleys.in

- Tech Stack: Node.js, Laravel, Vue.js, Docker, AWS.

Professional Experience

Software Developer

Ourshopee Pvt Ltd

May 2025 - Till Date

Ourshopee is a leading Marketplace platform in the Middle East, offering a wide range of products and services.

Responsibilities

- Architected low-latency web services utilizing Node.js and Fastify, optimizing Elasticsearch mappings and MySQL query plans for high-concurrency e-commerce traffic.
- Refactored legacy codebases applying SOLID principles, improving resource utilization and database query execution efficiency.
- Integrated regional payment gateways (Tamara, Tabby, Apple Pay), ensuring secure, atomic transaction handling and webhook reconciliation.

Software Developer

AurumWiseX Pvt Ltd

Aug 2023 - Oct 2024

WiseX is India's First & Largest Neo-realty investment platform by Aurum PropTech.

Responsibilities

- Designed and deployed scalable microservices using Node.js and Lumen, optimizing data handling and resource isolation for high-traffic environments.
- Integrated Razorpay Smart Collect APIs for automated payment reconciliation via virtual accounts and UPI workflows.
- Executed continuous performance tuning, refactoring core processing logic and optimizing relational database schemas.

Software Developer

GreenHonchos Pvt. Ltd.

Dec 2020 - Jul 2023

GreenHonchos is a full-stack D2C enabler, an ecommerce agency that provides end-to-end

- Translated business requirements into scalable architectural designs, developing core APIs to serve high-traffic web and mobile e-commerce platforms.
- Containerized application environments using Docker and orchestrated deployments on AWS to ensure high availability during peak retail traffic.

https://swoopos.com

- Tech Stack: Laravel, MongoDB, Docker, GitLab CI.
- Engineered secure, low-latency REST APIs for a mobile Point-of-Sale (POS) system, prioritizing transaction integrity and fault-tolerant data synchronization.
- Designed dynamic NoSQL database schemas in MongoDB to manage complex inventory and transaction ledgers.

https://tumi.in

- Tech Stack: Node.js, Microservices, Laravel, Lumen, Next.js, AWS Route53.
- Spearheaded the transition to a Microservices architecture using Node.js and Lumen, decoupling core services for modular scalability.
- Designed and optimized relational database schemas to handle varied product catalogs, high-concurrency checkouts, and multi-platform (Web/Mobile) inventory synchronization.
- Configured robust DNS routing and traffic management utilizing AWS Route53 to ensure minimal latency and high platform reliability.

https://hunkemoller.in

- Tech Stack: Node.js, Microservices, Laravel, Lumen, Next.js.
- Architected and implemented APIs and database schema for a cutting-edge platform from inception, ensuring seamless integration across web and mobile.

https://manishmalhotra.in

- Tech Stack: Node.js, JavaScript, Laravel, Lumen, Next.js, AWS Route53.
- Spearheaded the end-to-end development of APIs and database architecture for a high-impact couture e-commerce project.

https://www.ritukumar.com

- Tech Stack: Node.js, JavaScript, Laravel, Lumen, Next.js, AWS Route53.
- Designed and executed APIs and database schema, driving the project's architecture from the ground up.

Education

Bachelor of Computer Applications

Jamia Hamdard University, Delhi

2012 - 2015

Senior Secondary Education

QIC, U.P.

2010 - 2012

ecommerce solutions for D2C brands including digital branding.

Responsibilities

- Directed technical requirements gathering and system design, leading cross-functional engineering teams through the full software development lifecycle.
- Spearheaded the architecture of scalable RESTful APIs for D2C e-commerce platforms, enforcing strict separation of concerns.
- Implemented robust security protocols, including payload encryption, JWT/OAuth2 access controls, and secure coding standards.

Sr. Software Developer

PS QuickIT

Aug 2019 - Dec 2020

Responsibilities

- Developed and maintained core API endpoints for high-traffic e-commerce platforms, ensuring low latency and high availability.
- Optimized application security and runtime performance through collaborative code reviews and system audits.

Software Developer

Lexx Digital

Oct 2018 - Aug 2019

Responsibilities

- Constructed scalable REST APIs for mobile and web clients, implementing foundational security and data validation layers.

Certificates

Certificate of Completion

JavaScript from Udemy.

Certificate of Completion

Node.js from Udemy.
